

Oxygen Permeation and Leak Detection

Scope:

MOCON is a gas analysis systems and services designed to assess materials performance. The unit is able to test for the following: permeation analyzers of polymers, leak detectors and headspace analyzers of products. For production environments and quality control applications.

Test procedure:

The analytical instrument determines shelf life and permeation of oxygen, water vapor and other molecules through products and polymers.

Sample size:

For film and packaging applications Sample size 100mm x 100mm
